Education

2019 - Bacalaureat diploma, Highschool "Mihai Viteazul", Caracal

2022 - Bachelor degree in Economic Informatics - Academy of Economic Studies, Bucharest.

2023 - Master degree in Information Security in English - Academy of Economic Studies - student year 2

Professional experience and abilities

While in university, I have participated in an internship for an IT auditor position, at Transilvania Bank. Sadly, I could not fill in a position because of my lack of networking knowledge and the time pressure from university (having to take my degree).

After finishing my degree, I applied for an internship position at Totalsoft, after which I became a full-time employee, developing financial software. Nowadays, having one year experience. C/C++, C#, JAVA, Python, Javascript, HTML, CSS are the programming languages I feel confident in. I also know some language specific frameworks and libraries, proving my adaptability. (ex: .NET, Express, React, GraphQL, numpy, pandas, internal or open source libraries and other frameworks)

I have the ability to efficiently operate on different types of OS's, Microsoft's Office and basic knowledge of some graphical popular applications (ex: Adobe Illustrator, PhotoShop and soon 3D graphics).

Notable projects

- Front-end personal site – my first intercation with developing a web application. For a long time, I wanted to build my own site, in my own spare time and use it as a CV. It still needs to be modified to fulfill that role, but only by constructing it I have received much knowledge (for the site to be hosted, I had to load it up on github):

<https://github.com/lieautman/Cristian-Mihail-Dumitrescu-site>

- Project for speciality practicie for university in UI Studio. I have developed an automated process that scrapes the BVB website for information about the best businesses to invest into in Romania. The robot creates a local database that can be used further to implement a trading bot.

<https://github.com/lieautman/Proiect-anul2-sem2-practica-EY-RPA>

- Project in C# - winforms. Visual form project for a telephone company's desk. In the end it should be able to recive and send data to a database.

https://github.com/lieautman/Proiect-anul2-sem2-programarea_aplicatiilor_windows

- Project in javascript - React. Me and 2 colleagues completed a web app similar to github/bugzilla. The front-end is in React with Redux and the back-end is in Express.

<https://github.com/lieautman/Proiect-Tehnologii-web>

- Project for my bachelor degree – For my bachelor, I have made two apps: one is C# winforms and the other is a react based web app, both communicating with the database through an API server.

<https://github.com/lieautman/Licenta2022>

- Internship project for TotalSoft - This project's purpose was to simulate the business internal app structure, to get accustomed to it.
